BATON CARRIER

5

ABSTRACT OF THE DISCLOSURE

A baton carrier featuring an attachment assembly that is rotatable with respect to the holder portion of The baton carrier can be placed in various the carrier. angular positions with respect to the attachment assembly on the user's belt. The rotatable attachment assembly simplifies the removal of a baton, as well an enhancing comfort for the wearer, by allowing the user to position the carrier at an optimum angle. The baton carrier of the present invention can also accommodate belts different widths. In one embodiment, the attachment assembly has an adjustable member whose position along the assembly can be changed to allow belts of different widths to be looped therethrough. In another embodiment, one of a plurality of inserts of various sizes may be selected for insertion within the belt loop of the attachment assembly.
